Artie's Energy

Flowcharts • Wireframes • User Interface • Prototyping
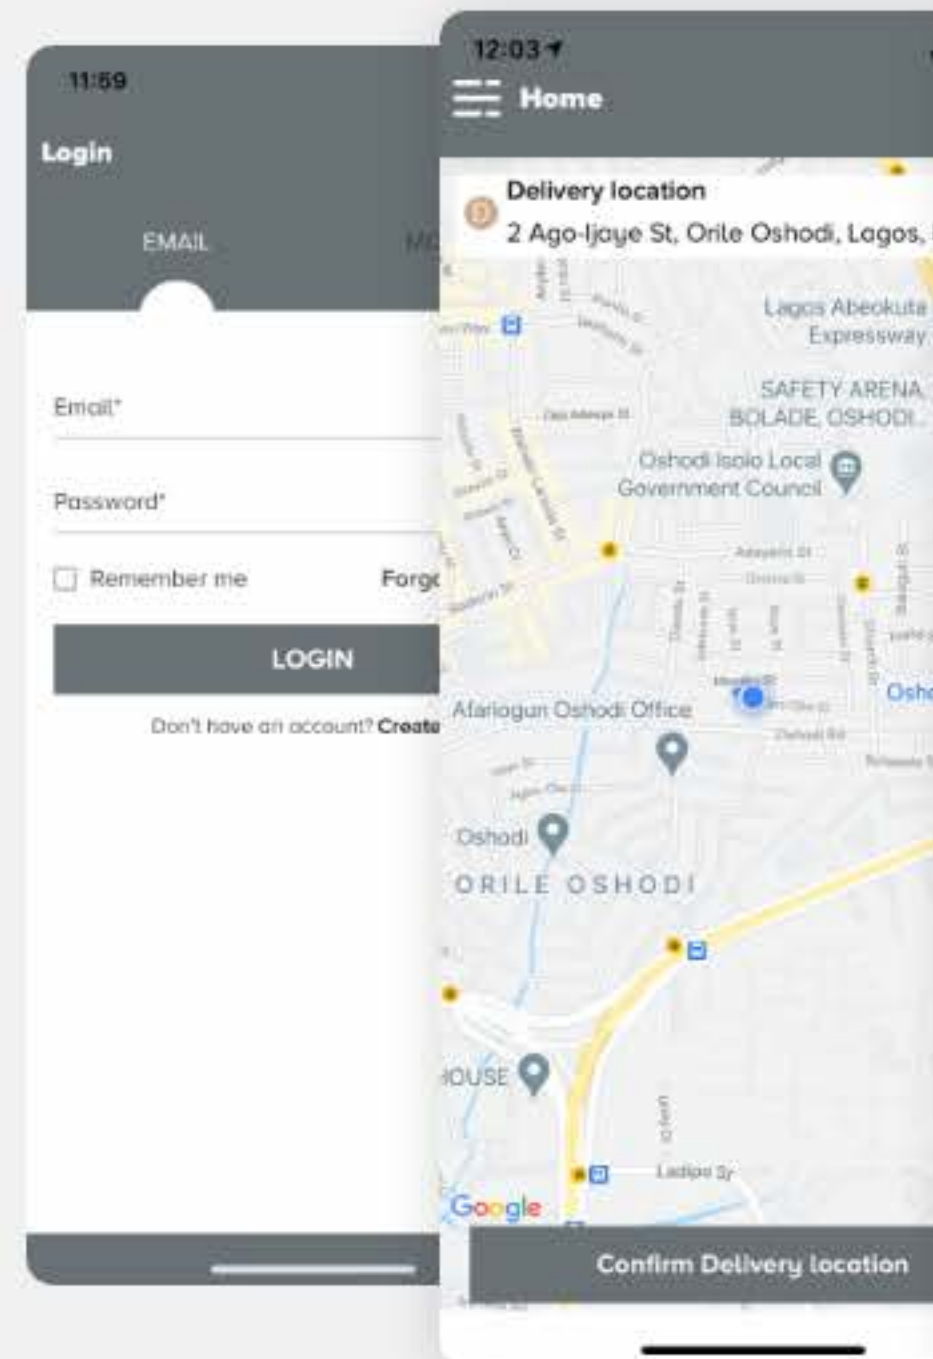

01 | Project Overview

The goal of this project was to redesign a fuel delivery app and get it ready for launch. Artie's Energy is a fuel delivery app where the customer can request the fuel through the app and get the fuel delivered to their doorstep. Drivers will get instant notification with the customers and order details.

The project was completed in two phases. During the first phase the majority of the app was completed, and during the second phase additional features were added.

02 | My

Current design

New design

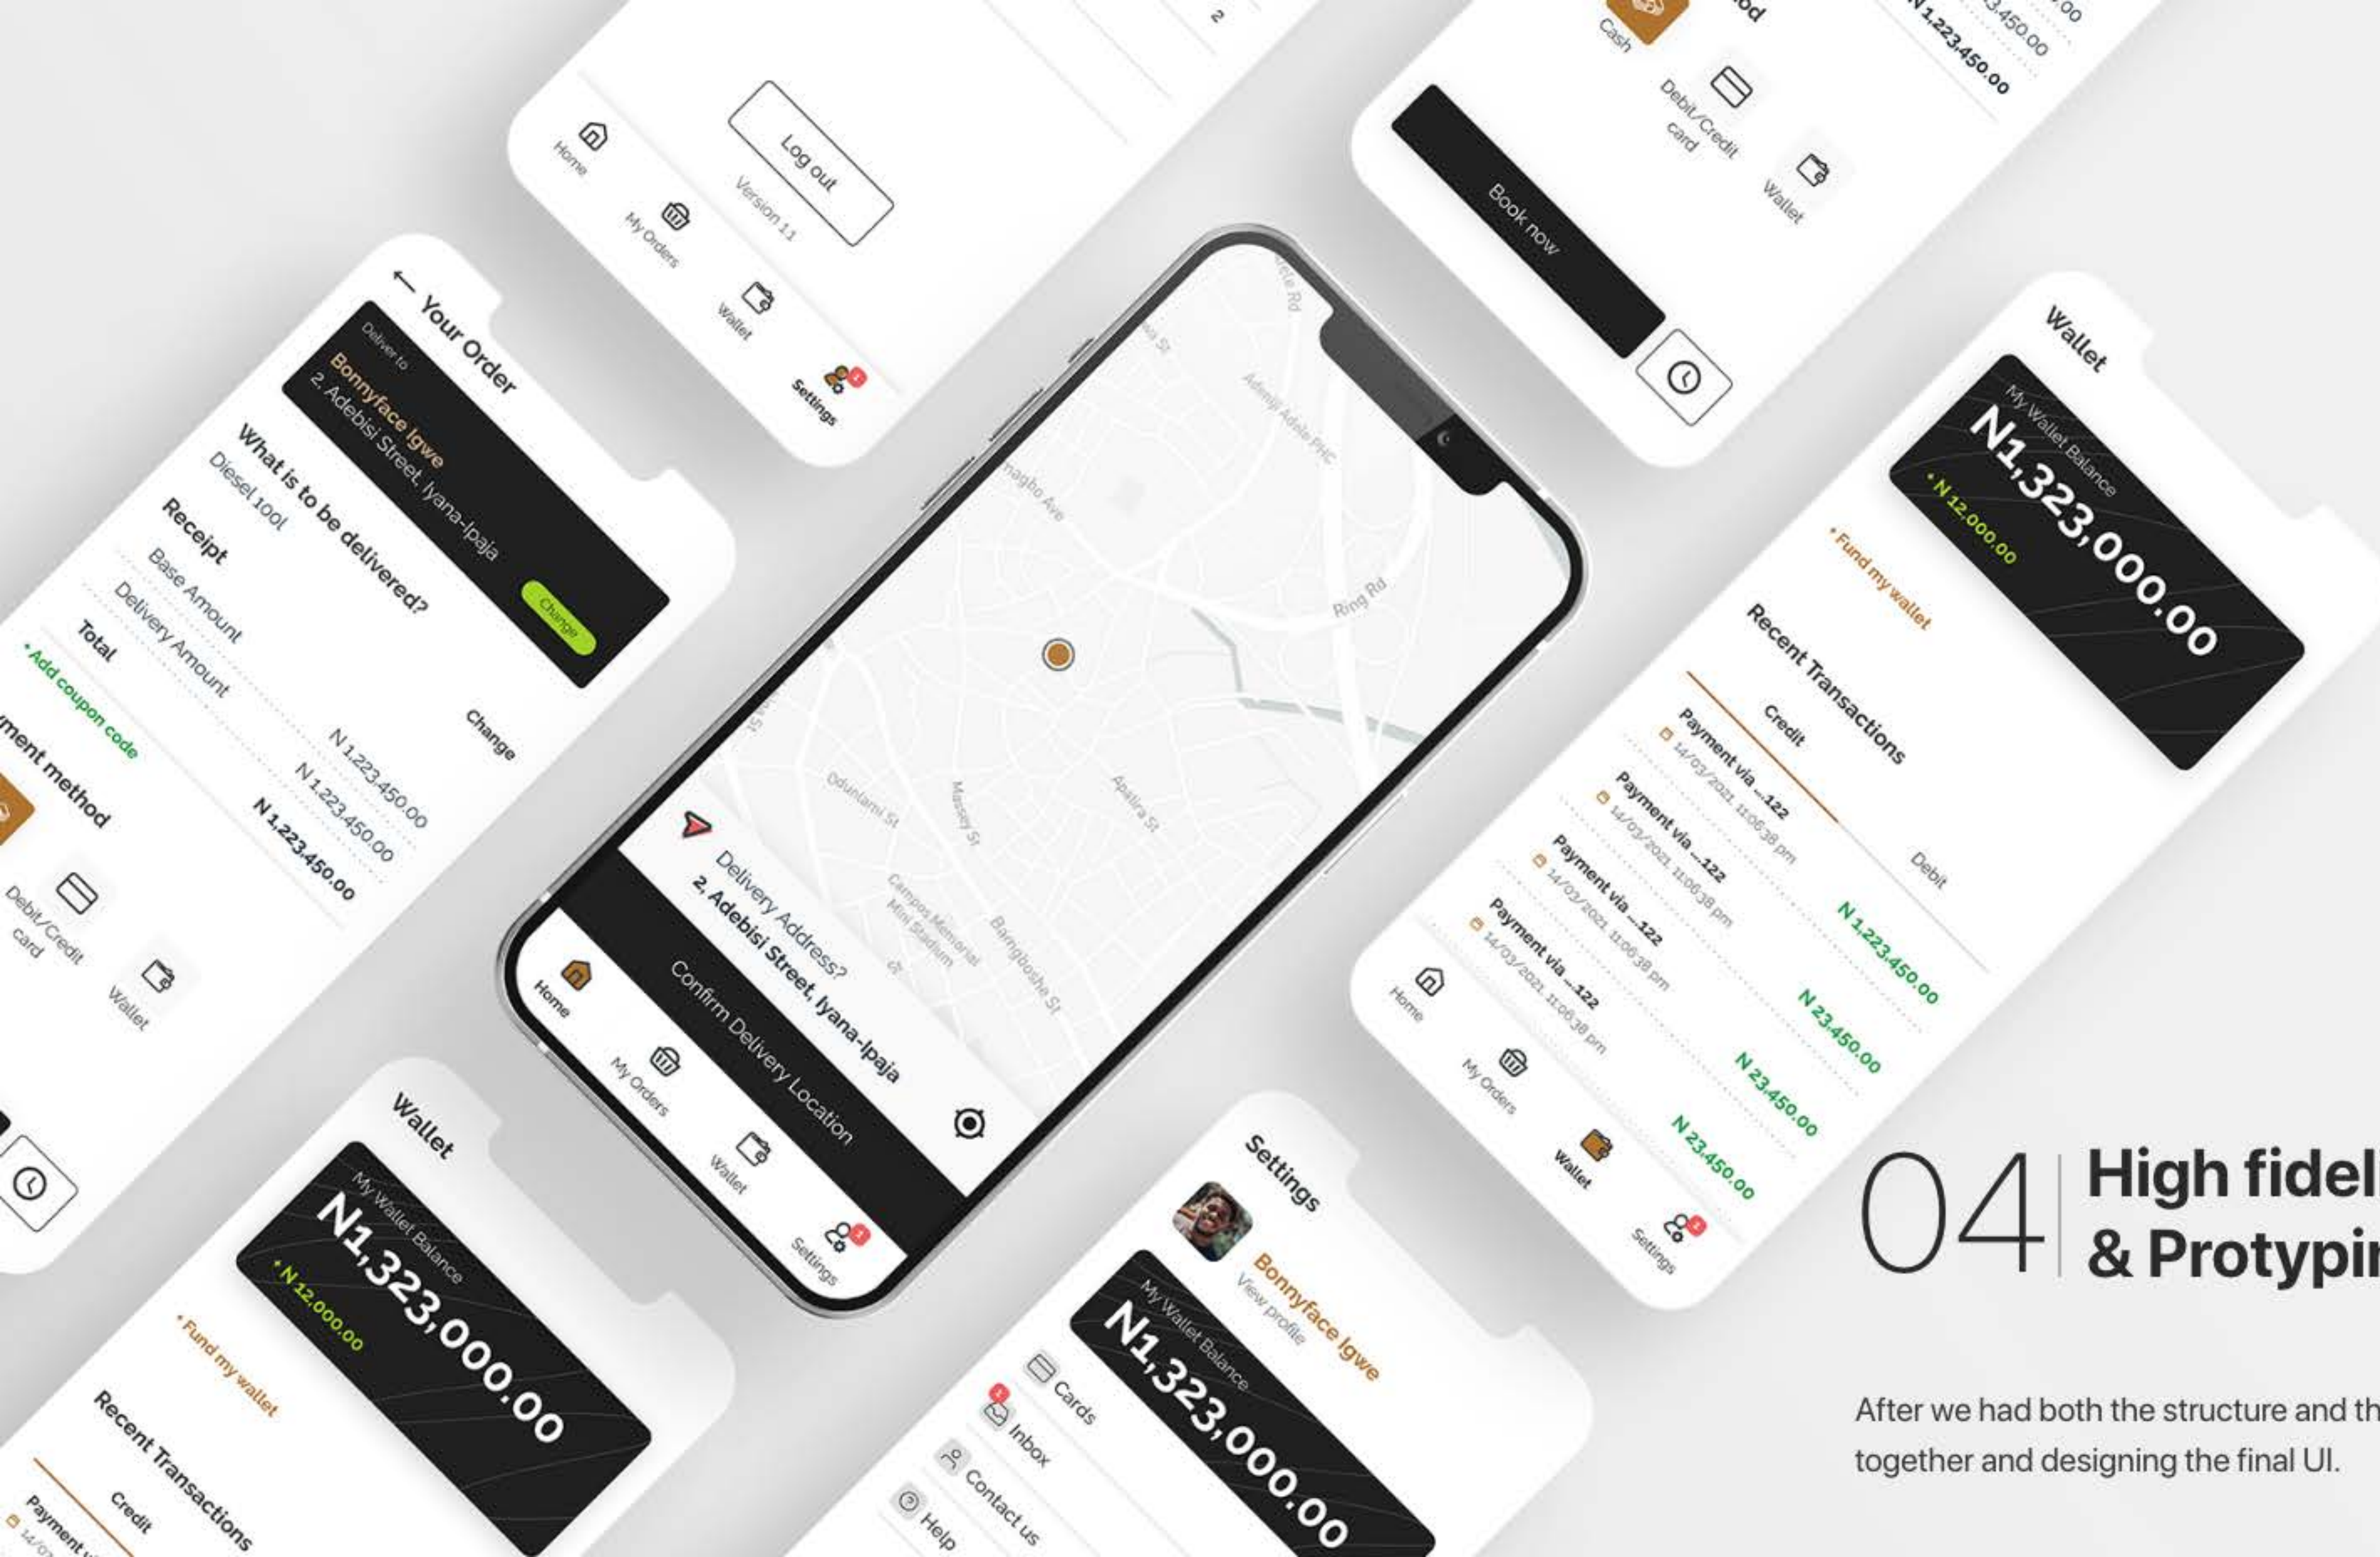

02 | **Contributions**

As this was an existing app the first step was to analyze the flow and overall aesthetic appeal of the app. After that my job was to simplify the process as much as possible and make it intuitive for the users, as well as improve the visual appeal of the entire app. The most important part of the project was designing the journey on placing an order that ensures a smooth experience for the user.

For this project I created a new design system, wireframes, defined flows and redesigned the UI as well as prototyping.

03 | **Userflow & Wireframe**

When I joined the project the back end was already completed and my task was to rebuild an easy to use interface around it. I decided to start by wireframing the most important screens like quick order page that's unique to this app. I continued by defining other screens that the user goes through to request an order.

04 | High fidelity design & Protyping

After we had both the structure and the wireframes I proceeded with putting it all together and designing the final UI.

Account Activation

Userflows • Wireframes • User Interface • Prototyping
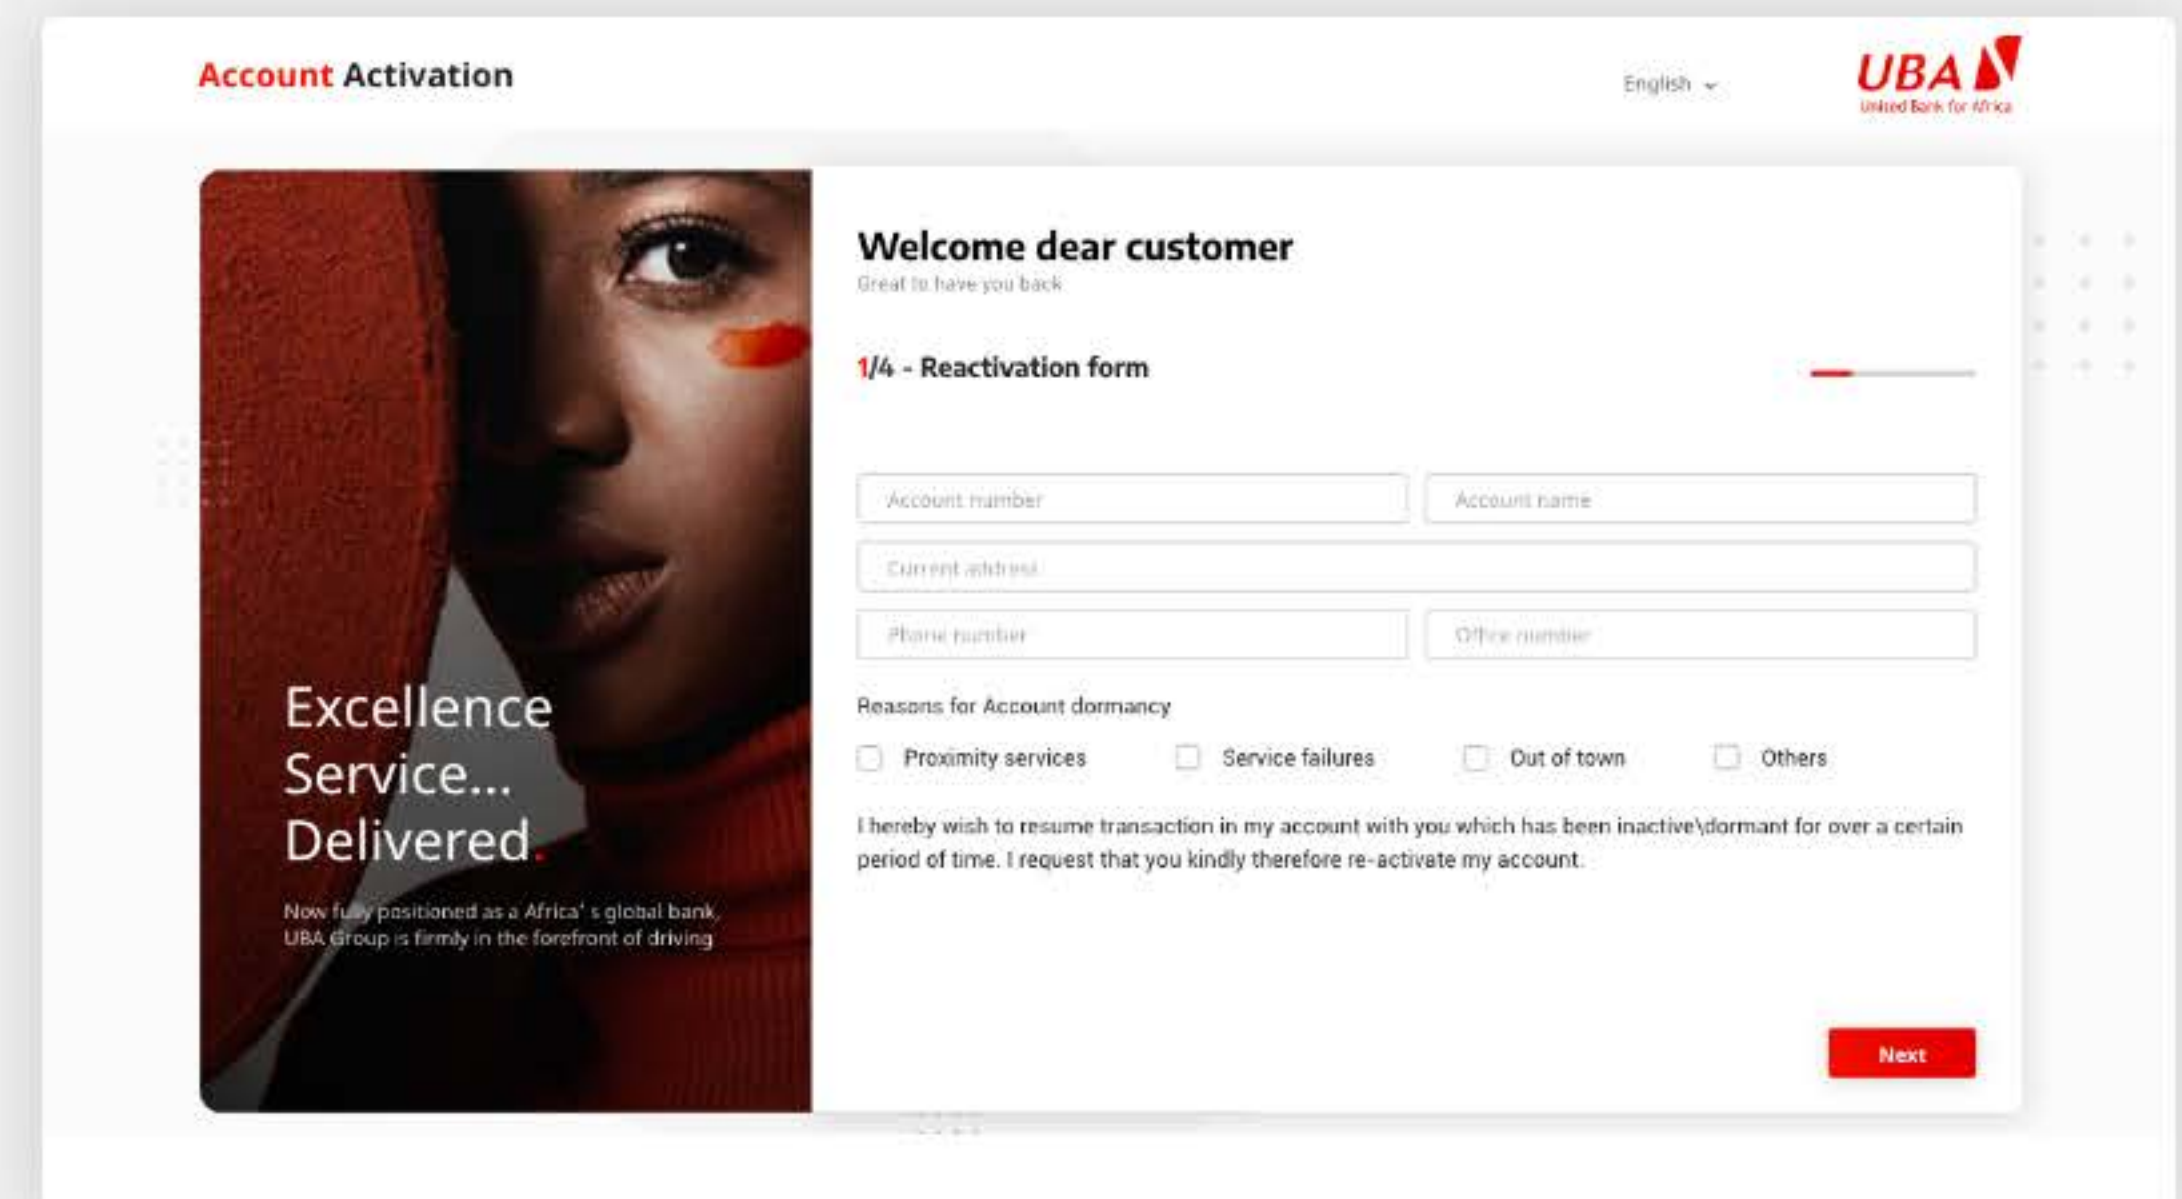

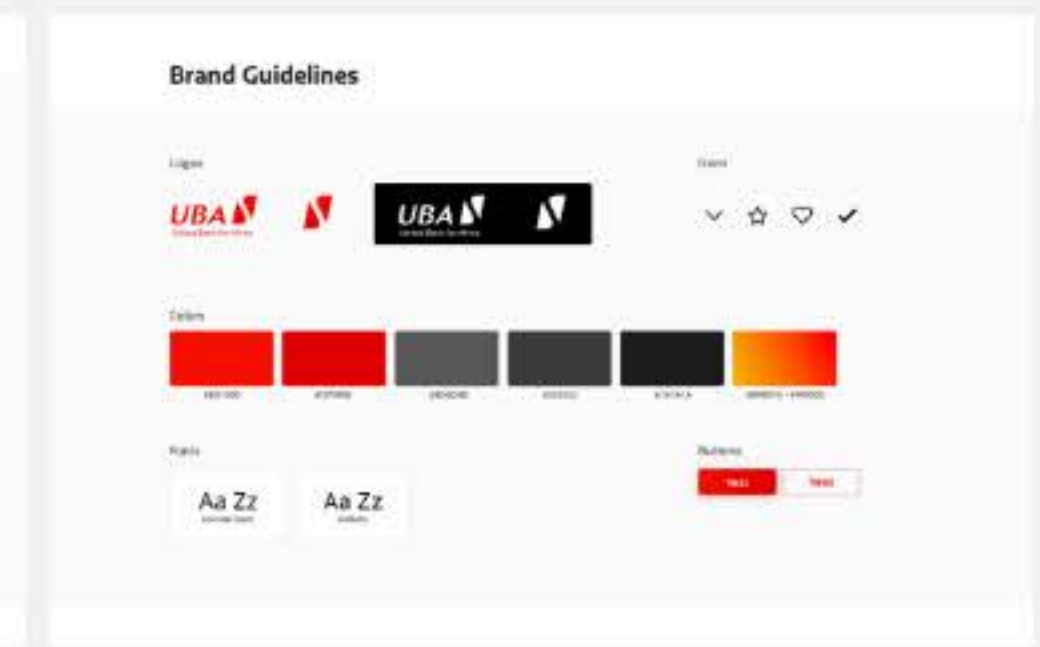

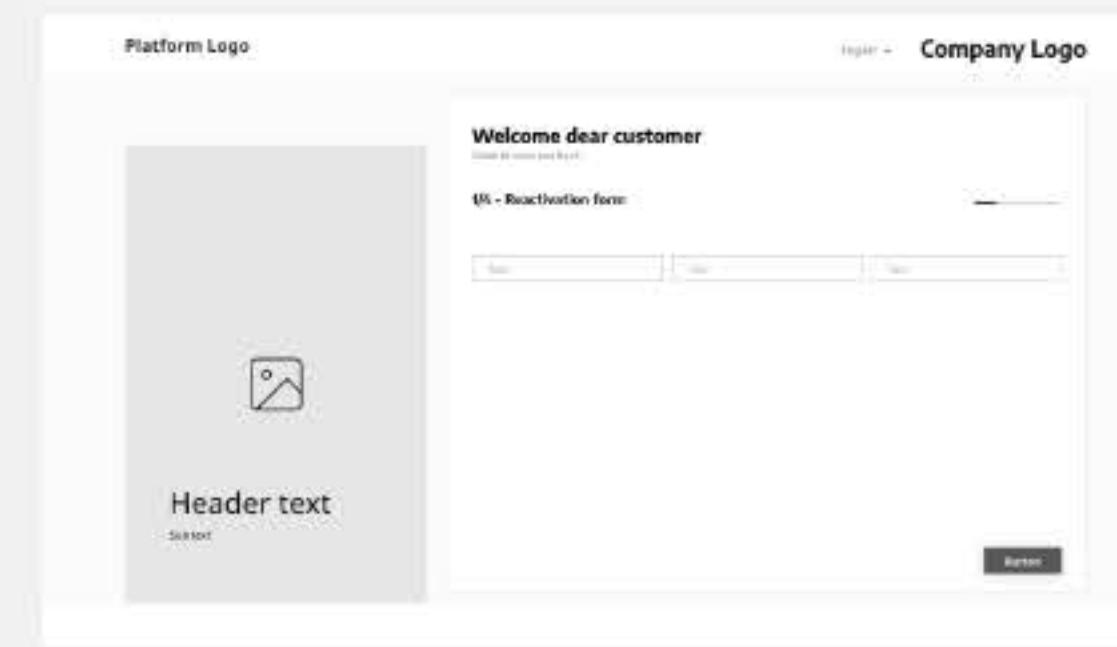

01 | Project Summary

Dormant accounts reactivation has been a hassle for the customers as they have to physically go the the bank for reactivation and validation. With Account Activation platform, Customers can easily fill the required details, upload ID and set a preferred time and date for online meeting as regard validation.

Contribution

My role was to conceptualize and redesign design the platform UI, UX, and visual design. The designs are currently in development and will be available on the website.

Scope

The goal of Account Activation is to create a platform for customers to easily reactivate their dormant accounts without having to physically go to the bank.

Internet Banking

Wireframes • User Interface • Prototyping

01 | Project Summary

The UBA branch in the USA had a need to redesign its internet banking platform and I was privileged to work with the team in order to revamp the platform. I chose a minimalistic layout approach to handle the information architecture.

Contribution

- I created an updated design system
- I created the user interface designs and interactions
- I participated in design review sessions

Scope

The scope of this project was to revamp the Internet banking app UI.

PROJECT

Syarpa

Wireframes • User Interface • Prototyping
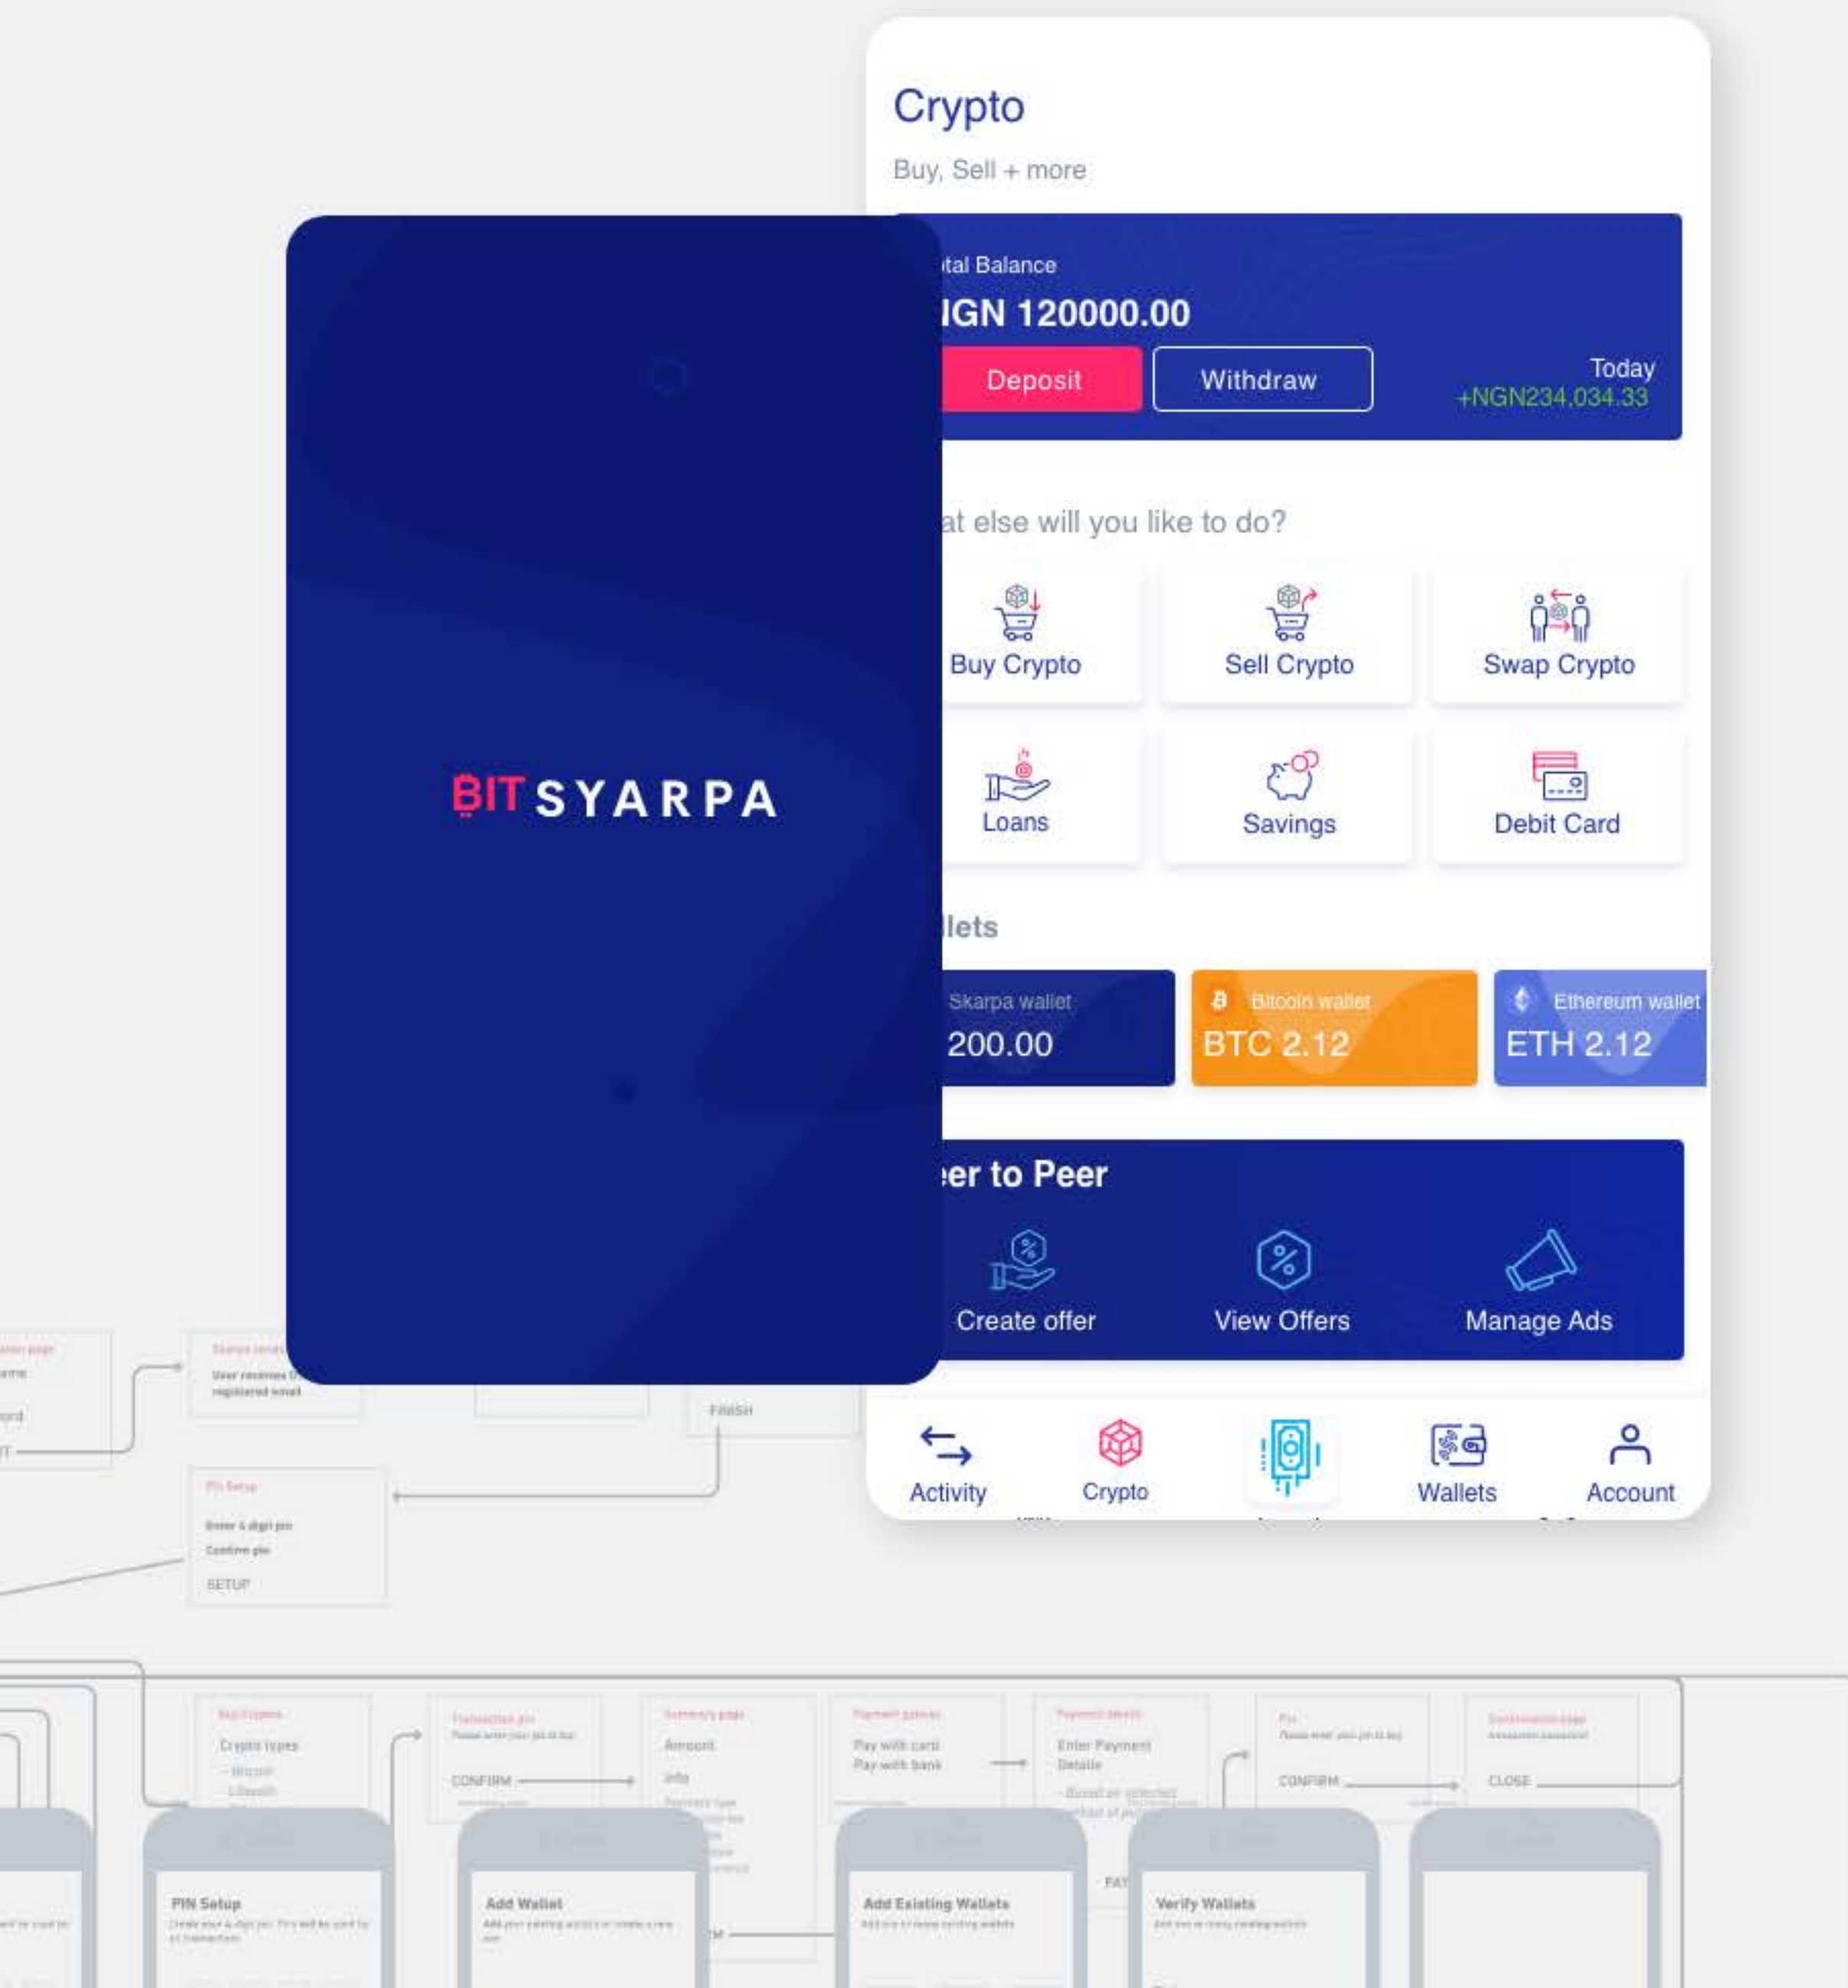

01 | Project Summary

The team wanted a crypto app that was seamless and easy to use. I handled version 2 which involved user story, wireframes, and high fidelity designs for the mobile, web app, and web landing page

Contribution

- I created user flows and wireframes
- I created an updated design system for release 2
- I created the High fidelity designs and protototypes

Scope

The scope of this project was to created the release 2 of the app which focused on the crypto operation of the business. Deliverables involved landing page, web app, responsive view for both landing page and web app, and mobile app

UBA Pensions

User Interface • Prototyping

01 | Project Summary

I worked with the pensions team to create a landing page where users can easily view the pension plans available and read more about it.

Contribution

- I created the user interface designs and interactions
- I participated in design review sessions

Scope

The scope of this project was to create a fresh modern microsite where customers can easily identify the various pension plans and benefits.

Africa Day

User Interface • Prototyping

01 | Project Summary

Due to pandemic, most conferences were required to move to the virtual space. The team was tasked with creating an online event platform for an annual event that will allow users register and attend virtually across the world.

Contribution

- I created the user interface designs and interactions
- I participated in design review sessions
- I collaborated with the engineers to ensure the designs were implemented accordingly

Scope

The scope of this project was to develop an online event platform that will allow users register and attend virtually across the world.

Internet banking

Wireframe • User Interface

01 | Project Summary

Following the release of our new UBA mobile app, there was a need to update the Internet banking platform to give web users the same experience. I was privileged to work with the team in order to revamp the platform.

Contribution

- I got country-specific images so that when you select a country, the image changes to something related to that country
- I created wireframe for the the landing page
- I created the High fidelity design

Scope

The scope of this project centred around updating the existing user interface landing page.
